"A human homolog of bacterial peptide deformylases.";
Submitted (NOV-2000) to the EMBL/GenBank/DDhJ databases.
Submitted (NOV-2000) to the EMBL/GenBank/DDhJ databases.
I. FUNCTION: Removes the formyl group from the N-terminal Met of
newly synthesized proteins (By similarity).
I. CATALYTIC ACTIVITY: Formyl-L-methionyl peptide + H(2)O = formate +
methionyl peptide.
I. COFACTOR: Binds 1 iron(II) ion (By similarity).
I. SUBELLULAR LOCATION: Mitochondrial (Fotential).
I. TISSUE SPECIFICITY: Ubdquitous.
I. SIMILARITY: BELONGS TO THE POLYPEPFIDE DEFORMYLASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              InterPro: IPR000181; Pep_deformylase.

Crystal structure of 2-oxoisovalerate and dehydrogenase and the architecture of 2-oxo acid dehydrogenase multienzyme complexes.";

Nat. Struct. Biol. 6:785-792(1999)

-!- FUNCTION: THE BRANCHED-CHAIN ALPHA-KETO DEHYDROGENASE COMPLEX CAPALYZES THE OVERALL CONVESION OF ALPHA-KETO ACIDS TO ACID. TO COMPAINS MULTIPLE COPIES OF 3 ENZYMATIC COMPONENTS:

BRANCHED-CHAIN ALPHA-KETO ACID DEHYDROGENASE (E1), LIPOAMIDE ACYLTRANSFERASE (E2) AND LIPOAMIDE DEHYDROGENASE (E1), LIPOAMIDE

ACYLTRANSFERASE (E2) AMD LIPOAMIDE DEHYDROGENASE (E3).

-!- CAPALYTIC ACTIVITY: 3-methyl-2-oxobutanoate + lipoamide = S-(2-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 15-JUL-1998 (Rel. 36, Last sequence update)

"Massive gene decay in the leprosy bacillus.";
Nature 409:1007-1011(2001).
-!- FUNCTION: Participates in site-specific recombination. Acts by catalyzing the cutting and rejoining of the recombining DNA molecules. Acts jointly with XerD (By similarity).
-!- SIMILARITY: BELONGS TO THE "PHAGE" INTEGRASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     15-JUL-1998 (Rel. 36, Last sequence update)
16-OCT-2001 (Rel. 40, Last annotation update)
Pyruvate dehydrogenase El component, alpha subunit (EC 1.2.4.1) (S complex, 42 kDa subunit) (Vegetative protein 220) (VEG220).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Caldwell R.M., Ferrari E.; "Sequence analysis of the mobA-ampS region of the Bacillus subtilis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Hemila H., Palva A., Paulin L., Arvidson S., Palva I.; "Secretory S complex of Bacillus subtilis: sequence analysis and identity to pyruvate dehydrogenase."; J.
